\textbf{ABSTRACT}

In this note, we fix some misprints in the paper of Lizama and Mesquita (2013) [2]. © 2015 Elsevier Inc. All rights reserved.
1. Introduction

After publication of the paper [2], several interesting consequences and applications have been derived, see for example [1,4].

However, it has been pointed out to the authors in either private communications or in some papers, that there are a few shortcomings that deserves to be elucidated. Even when they can be easily observed in a careful reading, see e.g. [4, Remark 32], in this addendum we want to make clear these misprints.

The following updates solve these inaccuracies.

• [2, Example 3.9 and Corollary 6.8]: Add $a, b > 0$.
• [2, Example 3.10]: For $t = k(a + \cos a) + a$, change $\sigma(t) = t + \cos t$ and $\mu(t) = \cos t$ by $\sigma(t) = t + \cos a$ and $\mu(t) = \cos a$, respectively.
• [2, Example 3.11]: For $t = k(a + \cos a) + a$, change $\sigma(t) = t + \sin t$ and $\mu(t) = \sin t$ by $\sigma(t) = t + \sin a$ and $\mu(t) = \sin a$, respectively.
• [2, Corollary 5.11]: Change $(I + (\cos t)A(t))$ by $(I + (\cos a)A(t))$ and $(I + (\cos t)A(t)^{-1})_{t \in \mathbb{F}_{a,\cos a}}$ by $(I + (\cos a)A(t)^{-1})_{t \in \mathbb{F}_{a,\cos a}}$, respectively.
• [2, Theorem 3.16 (iii)]: Change $T$ by $\Pi$. Cf. also [4, Remark 32, (i)].
• [2, Theorem 3.16 (iv)]: Add where $T$ is symmetric. Cf. also [4, Remark 32, (ii)].
• Proof of [2, Theorem 6.3, page 2301]: Delete the last inequality of this page, that is, “$< \|z - y\|_{\infty}$”.

We also remark that in between some results have been refined. For instance, see [3, Corollary 3.8] that improves [2, Theorem 3.4].
